Introduction

Based in Sydney and with offices in Brisbane, Bidsonline specialises in developing software products for the auction industry. This brochure summarises these auction systems.

Live Bidding Software

Bidsonline's live bidding system is integrated with our financial and operational systems for auctions. *Our customers can catalogue and photograph items for auction right up to the moment the auction starts!* Alternatively using our API interface it can be integrated with your auction system.

Last year 70,000 cars were auctioned using Bidsonline's live bidding system.

We send daily emails to our national database of bidders listing all our customers' auctions.

Your auction is live on the internet with less than a second delay for video and audio. Your bidders can bid with either their PC or Smartphone.

Vendor says sell! A vendor using Bidsonline's vendor reporting system can monitor your auction and send an immediate message to your auctioneer to sell or refer the bid.*

Your auctions can be setup with online bidding prior to the live event with the highest bid automatically set as the starting bid. Bidders can set their highest bid and the live bidding system will bid on their behalf. The system includes an optional credit card pre-authorisation process.

The Bidsonline live bidding system was developed by programmers in Australia and it is run on servers in Australia. When you have your auction we are in the office to support you!

Online Auctions

The screenshot shows a mobile app interface for Bidsonline. At the top, the status bar shows 'Telstra', signal strength, Wi-Fi, 3:37 PM, and 45% battery. Below the status bar is a header with 'simclient' and a search bar containing 'www.bidsonline.com'. The main content area displays 'Bidder No. 11' and 'Cat No: 6858 - LANE 1'. A photograph of a white Ford Focus is shown. Below the photo, it says 'Last Bid \$12,400'. The listing details include 'Lot No 133 You are not winning', '03/12 FORD FOCUS AMBIENTE LW WHITE 4D SEDAN 6 SP AUTOMATIC 1.6L 20408 kms', and 'Registration: BQ95EZ Expiry: 26/12/2013 Rating: 2. As Is Where Is'. A 'Bidding History' box shows '\$12,400 Floor Bid', '\$12,200 Floor Bid', and '\$12,000 Asking Price'. A large blue button labeled 'Place Bid' is next to a price of '\$12,600'. At the bottom, there is a navigation bar with icons for back, forward, share, book, and a notification icon with the number '2'.

[Bidding History](#)

Bidsonline's online auction system can be tailored to suit your requirements and integrated into your web site and operational systems. *Standard features of the online auction system are:*

- You can set your own bid increments helping you increase prices.
- Bidders can set their own maximum bids.
- The bidding screen has been designed so that it is easy for a bidder to re-bid when outbid.
- Lot closing times can be automatically extended if there is active bidding. Unlike fixed times our online auction system helps you get the best price. Our auction systems are designed to

Bidsonline's online auction is integrated with our financial and operational systems for auctions. Alternatively using our API interface it can be integrated with your auction system. *Some features of integration are:*

- If an item is sold whilst an auction is in progress it is automatically withdrawn and an email sent to the highest bidder.
- A vendor can lower the reserve using our online vendor reporting system and the item is automatically flagged with 'Reserve reduced'
- Catalogues are automatically uploaded, any changes to item descriptions are automatically updated on the auction site.

meet the interests of the vendor and auctioneer not the buyer!

Truck Plant & Equipment Auctions

TPE Auctions is Bidsonline's operational and financial system for truck, plant and equipment auctions. TPE Auctions is a client/server system with web based executive reporting. The server can be run on your servers or on our 'cloud' servers. The software is written using Microsoft programming languages and Microsoft's SQL database.

A key feature of TPE Auctions is the ability to set up a consistent method of describing the items you auction. This means you can have a database of common products that makes it easy to describe and enter products for auction. It also allows you to set up easy searching for your buyers.

Among the many features are the following:

- Integrated PPSR searches. PPSR certificates are automatically downloaded and recorded against the items. If encumbered the items can be flagged to withhold payment until cleared.
- Full trust accounting within the system.
- Hand-held booking in, inspections, stock take and tracking.
- Cataloguing using hand-helds.
- Financial reporting and accounting.

Sample data entry screen

The screenshot displays a data entry interface for an auction system. At the top, there are fields for 'Account' (Account Key: T&P, Account Name: T_P Earthmoving, Account Type: FLEET), 'Division' (TRUCK & PLANT), 'Category' (CRAWLERTRACT), and 'Purchase/ Consigned' (CONSIGNED). Below this is a tabbed interface with 'Item Details' selected. The 'Item' section includes 'Stock No.' (0), 'Registration No.', and 'Unreg Code'. The 'Glasses Code' section has a link 'F9 for Glass's Code'. The 'Identification' section includes fields for 'Year' (2000), 'Make' (CATERPILLAR), 'Model' (DOZER), 'Variant', 'Series', 'CabCanopy', and 'Tilt', each with a dropdown menu.

- Fully integrated with Bidsonline's live bidding system, online auctions and online vendor reporting system.

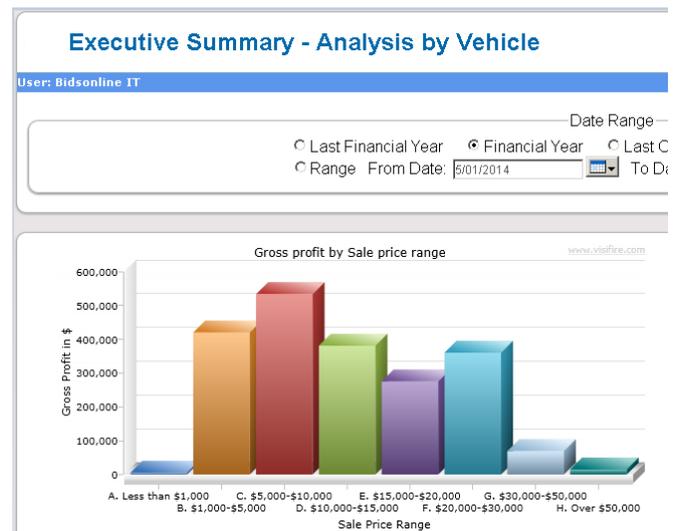

Car Auctions

Carsplus is Bidsonline's operational and financial system for car auctions. Carsplus is a client/server system with web based executive reporting. The server can be run on your servers or on our 'cloud' servers. The software is written using Microsoft's programming languages and Microsoft's SQL database.

Designed specifically for car auctions and volume sellers of used cars, Carsplus has been processing over 100,000 cars a year for 20 years!

- Integrated PPSR searches. PPSR certificates are automatically downloaded and recorded against the items. If encumbered the items can be flagged to withhold payment until cleared.
- Full trust accounting within the system.
- Hand-held booking in, inspections, stock take and tracking.
- Cataloguing using hand-helds.
- Financial reporting and accounting.
- VIN lookup provides accurate vehicle descriptions and dramatically speeds up booking in vehicles.
- Full retail selling capability including after market and extended warranty.

Sample screen from Executive Summary

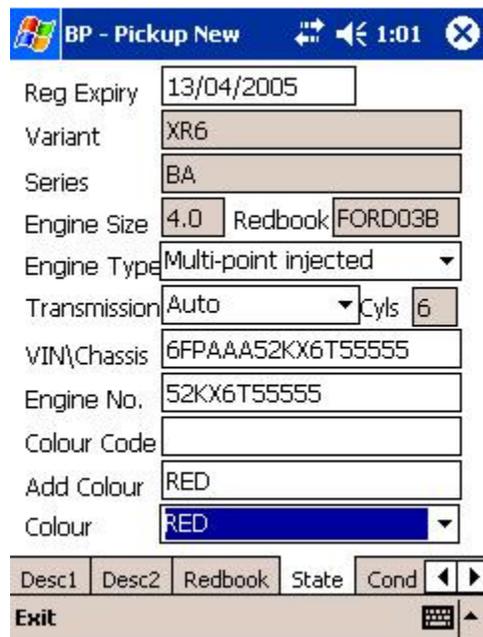

- Manages operations and rectifications.
- Workshop module.
- Fully integrated with Bidsonline's live bidding system, online auctions and online vendor reporting system.

HandHeld software for auctions.

Bidsonline develops a range of hand-held computer programs to manage your auction more efficiently. The programs run on Microsoft's windows mobile operating system.

Our hand-held software covers the following auction activities:

Booking in vehicles. On arrival vehicles are identified using a series of drop down boxes of make, model etc or using the VIN lookup program. Any problems noted on the staff automatically create an inspection task in the workshop module of our auction software.

BP - Pickup New 1:01

Inspections. Detailed inspections and quotations can be made using a hand-held. The program steps the inspector through the area, problem and resolution, this creates a code which in turn retrieves a price for the work. The rectification quotation is then automatically loaded on to our vendor online reporting system for approval.

Stock-take. Using the built in scanner bar codes on vehicles and equipment are quickly scanned to produce a stock take.

Gate tracking. You can use the hand-held at your gate to check vehicles or plant leaving your auction.

Cataloguing. The catalogue program lets you build up a catalogue by scanning vehicles or plant on the auction floor. Significantly improving the time to catalogue for an auction.

Online vendor reporting

Bidsonline’s online web reporting allows vendors to view all reports, set reserves, approve rectification work and book transport for items to be taken to the auction.

Automatically coupled with Bidsonline’s Carsplus and TPE Auctions software vendors are kept fully informed of the progress of their items through the auction. As soon as an item is sold from the auction box it is reported in the post auction report. Payment and sales advices are available to your vendors as soon as the payment is drawn. Vendors are able to create tasks and view notes on their items, this keeps all correspondence regarding the items in one place.

Photo bay software

Bidsonline's photo bay software dramatically reduces the time to photograph cars, trucks, plant and equipment for auction.

The software controls up to 8 cameras and is linked to our operational and financial systems Carsplus & TPE Auctions. The process works like this:

The car is driven into the photo bay. The driver enters the stock number into the software and clicks a the 'Photograph' button.

The software tells the cameras in each corner to take a photograph. The driver then opens the bonnet and the driver's door, returns to the PC and clicks the button again. The software then tells the overhead camera and the camera opposite the driver's door to take a photograph.

The software retrieves all 6 photographs from the cameras, renames them with the stock number and transfers the photographs to your web site.

The driver can zoom the cameras in or out from the software for small and large cars or buses.

Live dutch auction bidding software

Bidsonline have developed a unique live dutch auction system. Originally developed for the wine industry the software runs a reducing price auction or dutch auction. For example: an auctioneer may start the bidding for, say, 50 cases of wine at a price above the reserve. The auctioneer then brings the price down to the market price. Bidders can click the 'buy' button at any time to secure a case, this introduces competition as the available quantity of cases is reduced. All bidders pay the lowest price reached by the auctioneer.
